Thanks for all the work on this real life RPG! As a person who also suffers from chronic pain that makes playing RPGs (let alone developing one) excruciatingly painful, this game means a lot to me and people like me. I saw this thread over at the gameschool subreddit ( and thought it would be cool to try out your game and then get a chance to run this brand new game on your vita. It turns out that it's a bit hard to play because of all the issues you've been working on so diligently. I'll try to keep an eye on what I can do as far as testing goes. If there are any questions, feel free to ask them here or just hit me up on twitter at Hi guys, I know that Secrets of Grindea has been out for a bit now but I just bought it recently so I can't wait to play it. The only issue that I have is that it looks like there is no online co-op. I know there's code to allow for this since I was able to try out a couple of games that have it. I'd like to know if you have any info on this or a question for me. I have a PC version of the game and a vita version but would love to be able to play my vita with my friends, please tell me what I need to do. Jake Muller Developer, Mixmaxi Jake Muller is the founder of Mixmaxi Inc. a digital media and trade publishing company. Mitchell Bruno Developer and Editor Mitchell Bruno is the director of development at Nostalgia Hockey where he is responsible for the latest revamp of the game's codebase and support for the 2011 PlayStation 3 update. He is a die-hard Chicago Cubs fan. Playing the new game in a different corner of the world is always satisfying because the environment changes. The objects look utterly different and there's a brand new smell in the air. It's fun to see this type of game layout and graphics craftsmanship from a brand new studio especially in the genre. The game's map I love the concept of the way the game's map is set up with information panels displaying locations of the different locations shown. It provides a heads up display that can help you prioritize your movement when interacting with other game elements. Overall, the location viewing panels on the map appear to be a very good use of the PS Vita's new 3D graphics which are different than traditional 2D graphics. The map isn't as large as those seen in most commercial games but don't be put off by that because this type of environment lends itself more to single player. It also looks neat because you can see what little hills, lakes, mountains and forests the game actually has. It evokes the sense of a true town that would previously have been more apparent if it were on a larger scale and more graphic heavy. If only everyone had a PS Vita There isn't really a thing to dislike about this game. It looks great, it's fun to play, and most importantly, it showcases a lot of potential in a brand new studio. If only everyone had a PlayStation Vita. What I did not like Let me reveal what didn't fit my personal grade for this game. I only have a PS Vita and I don't play many games on it and this is the only one that I've reviewed on it. It could be due to limited experience or what it is I didn't find appealing. Corona Simulator is currently available for the PS Vita. This game has the potential to be a great experience and that's all there's to it but there's not a strong enough incentive to start playing it. The game's opening minute or so did not
