AutoCAD is one of the best and most popular tools for drafting and design in architectural, civil, and mechanical engineering, among other fields. It offers many features, including powerful object-modeling capabilities and a range of collaboration and management tools that are often not available in other CAD programs.

**History** The AutoCAD family was originally developed by Albrecht Euringer at the Technical University of Munich (TUM) with the help of Dr. Art W. Back and Dr. Edgar G. M. Hasselmann. It was initially called CAD-Editor, then CAD-4-Engine and finally AutoCAD. AutoCAD entered production in 1983 and was officially released on December 15, 1982 as CAD-4. In 1985, the first software based on the Microstation product suite was introduced as AutoCAD X. AutoCAD 100, a better version of AutoCAD X, was released in 1987. In 1989, the AutoCAD desktop version was replaced by AutoCAD LT (AutoCAD Level Edition), which was intended to run on Unix and Windows NT workstations. The second version of AutoCAD was released as AutoCAD 2000 in 1992. It was built around the object-oriented programming architecture (OOP) and shipped with a new UI, a Windows-specific file format, a user-to-component communication system, an upgraded drawing manager, and enhanced 3D object-modeling capabilities. AutoCAD XP, a major new release of the software, was released in October 1994. AutoCAD 2000 was renamed to AutoCAD 2003 in March 1996. This release was the first version to be made available as a version-independent script file, and shipped with the Windows-specific file format. AutoCAD 2004 was released in September 1998, and was renamed to AutoCAD LT 2004. This version included AutoCAD R14, a document management system, and several new tools. AutoCAD 2005 was released in November 1999. This version was a major upgrade of AutoCAD LT 2004, bringing many new features to the product. AutoCAD LT 2005 was introduced in February 2000. This was a major upgrade of AutoCAD LT 2004. Its major new features included a new user interface, enhanced object modeling, the ability to render 2D and 3D animations and movies, and improved multilayer capability. Auto

Windows Metafile or WMF format drawing files can be converted to AutoCAD DWG format using the AutoCAD - Windows (Non-AutoCAD) driver or the Windows GDIPlus library. HELIX Helix is an open source project that uses AutoLISP to create AutoCAD extensions. Source code is available under the BSD license. Topographic Editing (TEd) Topographic Editing is a generic topology editor for AutoCAD. It allows creating and editing topological information on all kinds of objects. It is a drop-in replacement of the Geometry view available in AutoCAD. Topographic Editing is part of the Autodesk Exchange Apps. Topographic Editing enables users to create topological information in a drawing and also enables users to edit existing topological information. Users can display topological information in the geometric or the schematic drawing view or in the Topological view. It has a number of topology operations, for example, determine intersection, and cut. A number of configuration options are available to users like horizontal/vertical layout, visibility, 3D and polar views, base point, etc. References Category:Geometry visualization software Category:Computer-aided design software Category:3D computer graphics software Category:Proprietary software Category:AutoCADHigh-stakes HCMHC interventions: real or just a mirage? HCMHCs have revolutionised health services by tackling the 'burden of disease' but they are under-utilised. We sought to investigate the characteristics of HCMHCs and examine their effectiveness. Data were analysed from a national survey of 40 HCMHCs which included a face-to-face structured interview with the HCMHC manager and a review of a selection of case notes for each client. A total of 1,056 clients were referred to and reviewed by an HCMHC between June 2007 and December 2008. The majority (n=924; 90%) were referred by a primary care clinician or G.P. In total, 2,879 client contacts were recorded, including 692 (25%) that involved new client contacts. Following the HCMHC intervention, 63% of clients were rated by their GP as being 'better','much better' or 'a lot better'. A total of 1,946 contact records were matched to case notes; 88% of these were able to af5dca3d97
