## Hysys - V 3.2 Download Pc EXCLUSIVE

The following instructions will focus on the general steps required to obtain a working EXE file of HYSYS.Plant V24.0. HYSYS.Plant V24.0.EXE normally contains all of the files necessary for its startup. However, in case of a corrupted file, this file may be missing a vital file. In order to get an EXE file, the following general instructions are provided. If you are obtaining your first EXE file of HYSYS.Plant V24.0, our recommendation is to download the COM version using the Web interface as following steps. 1. You can also access the

Aspen HYSYS software by double clicking on the main Aspen HYSYS.exe file on the desktop (or C:). The start-up form should appear. Use the OK button to start the software. The next step is to click on the "Options" button to check a box to save a startup backup.

When HYSYS opens, the first screen that you will see is the GUI. Click on the "Fluid Simulation" tab near the top and you will see a selection of choices. If you are not familiar with selecting a tool, you can click on any of the options and read the help files or tutorial videos provided with the software. For the basic setup of this tutorial we will be using an Aspen(R) InfoTrace(R) node and a MATLAB workspace. The next section will detail both.

We are going to create a new workspace. This means that Aspen HYSYS saves all of the files and settings for our model to the current location. This has two potential benefits - 1.) you can have multiple workspaces and 2.) if you need to reinstall Aspen HYSYS you can simply load these files rather than loading the files from a backup location and restoring them, as we will see below.
